

March 26, 2010

Dear Valued Customer,

As we participate in the advancement of healthcare into the future, the choices we make today are driven by our promise to deliver cost-effective healthcare solutions to our customers.

In an effort to be as efficient as possible, Hospira has decided to retire the legacy products listed on the following pages.

Continuing to supply these items consumes manufacturing capacity that could otherwise be used to provide higher demand products. It also requires bringing them into the current FDA registration process and in doing so would reduce the resources allocated to develop products that have a greater impact for our customers. Our decision to retire these products is also based on the fact that the majority of these low-demand products are available through other suppliers.

This decision aligns with our commitment to funding and developing products that have the potential to transform healthcare. Most recently, Hospira has been instrumental in taking hundreds of millions of dollars out of the US healthcare system with the introduction of a single generic specialty injectable product. And that's only the beginning.

We see a myriad of future opportunities to make our entire healthcare offering more effective, innovative and accessible. In short: to change the course of healthcare.

We invite you to be a part of it and advance with us.

Sincerely,

A handwritten signature in black ink that reads "Thomas G. Moore". The signature is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.

Thomas G. Moore
President, Hospira USA
